

1) Bootstrap 4 vs Bootstrap 5

Here's a comparison between Bootstrap 4 and Bootstrap 5 in tabular form:

Feature	Bootstrap 4	Bootstrap 5
Browser Support	Supports IE 10 and IE 11	Drops support for Internet Explorer, focuses on modern browsers
Grid System	12-column grid system, fixed classes (<code>.col-sm</code> , <code>.col-md</code>)	Improved grid with <code>.gutter</code> classes and added <code>.xxl</code> breakpoint
JavaScript Dependency	Relies on jQuery for plugins	No longer dependent on jQuery, uses vanilla JavaScript
Forms	Uses <code>.form-group</code> , <code>.form-row</code>	Simplified forms, removes <code>.form-group</code> , introduces <code>.row-cols-*</code>
Card Component	Cards support multiple rows	Optimized card design with fewer classes needed
Icons	No built-in icon set	No built-in icon set (same as Bootstrap 4, but Bootstrap Icons recommended)
Utilities	Basic utility classes like <code>.m-*</code> for margins, <code>.p-*</code> for padding	More utility classes (spacing, typography, colors) and customizable utilities
Custom Properties (CSS Vars)	Minimal usage of CSS custom properties (variables)	Extensive use of CSS custom properties for easier customization
Typography	Static font sizes	Responsive font sizes using <code>.rfs</code> (Responsive Font Sizes)
Gutters	Gutters are controlled using <code>.no-gutters</code> on rows	More flexible control over gutter widths using new classes
Dropping of Deprecated Elements	Retained old elements like <code>.input-group-*</code>	Dropped deprecated elements (e.g., <code>.input-group-*</code>)

Feature	Bootstrap 4	Bootstrap 5
Responsive Font Sizes	Not enabled by default	Enabled by default for better scaling on different devices
Modal	Focus trapping and static backdrop were less customizable	Enhanced modal with better focus trapping and customizable backdrop
Migration	Slightly easier transition from Bootstrap 3	More breaking changes from Bootstrap 4 to Bootstrap 5
Navbars	Uses <code>`navbar-expand-*`</code> for responsiveness	Navbars are more responsive with enhanced classes for layout control
Columns Layout in Forms	<code>`form-row`</code> used for form column layout	Uses standard <code>`row`</code> for form layouts, dropping <code>`form-row`</code>

This table highlights key differences between Bootstrap 4 and Bootstrap 5. Bootstrap 5 focuses on modernizing the framework with better performance, accessibility, and developer experience.
