Web Application:

The applications which will provide services over the web are called web applications.

Eg: gmail.com, facebook.com, durgasoftvideos.com et

Every web application contains 2 main components

- 1) Front-End
- 2) Back-End

1) Front-End:

- It represents what user is seeing on the website
- We can develop Front-End content by using the following technologies:
 - HTML, JS, CSS, JQuery and Bootstrap
- JQuery and Bootstrap are advanced front-end technologies, which are developed by using HTML, CSS and JavaScript only.

HTML: HyperText Markup Language

Every web application should contain HTML. i.e HTML is the mandatory technology for web development. It represents structure of web page
